EPA holding first hearing on regulating airplane carbon

By Kevin Rogers

Fresh off of finalizing its plan to slash power plant carbon emissions, the Environmental Protection Agency is holding its first public hearing Tuesday on its new effort to regulate aircraft emissions.

The hearing at EPA's headquarters will give stakeholders their first chance to address the issue since the agency proposed an endangerment finding in June designating airplane carbon

emissions as a threat to human health.

In announcing the proposed rulemaking, EPA estimated that aircraft account for 3 percent of total U.S. greenhouse gas emissions, 11 percent of total U.S. transportation emissions and 29 percent of global aircraft emissions.

Should the agency move ahead with rulemaking, the current proposal would not affect military vehicles, smaller recreational airplanes or helicopters.

When first announced, the proposal drew swift fire from Republicans, who said it was another regulatory burden that would hike costs for an industry already making gains on fuel efficiency.

"This administration is creating unnecessary red tape across every industry to progress an economically disastrous climate agenda," Senate Environment and Public Works Committee Chairman James Inhofe, R-Okla., said at the time.

"American air carriers have already made great strides in fuel efficiency and many have committed to a 1.5 percent annual fuel efficiency improvement through 2020. Adding the EPA into the equation will only increase costs without any substantial benefit."

EPA says it won't publish the final rule until after ongoing international negotiations over carbon reductions are wrapped up with the industry in early 2016. Those talks have been led by the UN's International Civil Aviation Organization, which helps set international aviation policy.

The industry argues it is doing everything technologically possible to reduce fuel consumption and carbon emissions, particularly because fuel is the industry's No. 1 cost.

Lawmakers press McCarthy for answers, action on mine spill

By Kevin Rogers

Environmental Protection Agency Administrator Gina McCarthy is taking heat from lawmakers for her agency's poor communication following an accidental spill of more than three million gallons of mining waste that has sullied the Animas River.

The spill, triggered by EPA equipment at the Gold King Mine on August 5, discharged heavy metals including lead and arsenic into the river. Certain stretches of the Animas and San Juan rivers in Colorado and New Mexico have been declared disaster areas in the wake of the spill.

In separate letters to McCarthy, House Science, Space and Technology Committee Chairman Lamar Smith, R-Texas, and New Mexico Sens. Tom Udall and Martin Heinrich, both Democrats, lambasted the agency's response to the incident and called for swift corrective action.

An EPA spokeswoman said the agency had received the letters and was reviewing them.

"It has been five days since the spill and the EPA has failed to answer important questions, including whether the polluted water poses health risks to humans or animals," Smith wrote. "It is concerning that the agency charged with ensuring that the nation's waters are clean is reportedly responsible for the toxic water spill at Gold King Mine."

Smith, a frequent critic of the agency's regulatory agenda, called on McCarthy to schedule a briefing with his committee by Aug. 17 to offer details on EPA's water analysis of affected bodies of water; details on the chemicals present in the mine; documents on the lead up to the spill; and any potential risks that such chemicals pose to humans or wildlife.

The New Mexico senators, joined by Rep. Ben Ray Lujan, D-N.M., called the agency's communication in the aftermath of the spill "troubling" and urged McCarthy to appoint a single leader to handle EPA's response going forward.

"Our offices, as well as leaders in the State and our constituents, had to learn of the spill and critical details from news reports before receiving any information from EPA," the lawmakers wrote. "In an effort to improve communication and coordination, we believe that EPA should establish a single point person to oversee the agency's efforts."

The lawmakers also pressed McCarthy on developing a toll-free number for residents in New Mexico to receive updates, provide information on any ongoing mine inspections and to develop a water supply plan for areas the leak affected.

"Since learning of the spill, our offices have been in constant communications with EPA, however, we have yet to be presented with a comprehensive plan from the agency to provide water to those whose wells have been affected, farmers whose crops are not being irrigated, ranchers whose livestock are without water, and people for drinking, cooking, and showering," they said. "EPA must provide impacted States with all of the resources that it has at its disposal."

Officials downstream from Colorado mine spill demand answers

By Susan Montoya Bryan and Ellen Knickmeyer

ALBUQUERQUE, N.M. (AP) — Local officials in towns downstream from where millions of gallons of mine waste spilled into a southwest Colorado river are demanding answers about possible long-term threats to the water supply.

Colorado and New Mexico declared stretches of the Animas and San Juan rivers to be disaster areas as the orange-colored waste stream made its way downstream toward Lake Powell in Utah after the spill Wednesday at the abandoned Gold King mine near Silverton, Colorado.

The 3 million gallons of mine waste included high concentrations of arsenic, lead and other heavy metals. Workers with the EPA accidentally unleashed the spill as they inspected the abandoned mine site.

EPA officials said Monday that there was no leading edge of contamination visible in downstream sections of the San Juan River or Lake Powell. But that has done little to ease concerns or quell the anger caused by the spill.

Shell seeks modified permit to drill deeper in Arctic offshore drilling

By Dan Joling

ANCHORAGE, Alaska (AP) — With a key safety vessel repaired and in northern waters, Royal Dutch Shell PLC has applied to amend its federal exploratory drilling permit to allow drilling into oil-bearing rock in the Arctic Ocean off Alaska's northwest coast.

Shell last month received permission to begin some drilling at two sites in the Chukchi Sea but was banned from digging into petroleum zones roughly 8,000 feet below the ocean floor.

The federal Bureau of Safety and Environmental Enforcement limited the permit then because equipment was not on hand to handle a possible well blowout.

The equipment is on the Fennica, a leased Finnish icebreaker that suffered hull damage July 3 as it left Dutch Harbor, a port in the Aleutians Islands.

Michigan lawmakers seek study, hope to block Canadian nuclear waste plan

By John Flesher

TRAVERSE CITY, Mich. (AP) — Members of Congress from Michigan announced a new effort Monday to prevent the burial of Canadian nuclear waste near the Lake Huron shore, calling for a study by an agency that represents both nations in boundary waters disputes.

Democratic Sens. Debbie Stabenow and Gary Peters said they will introduce legislation that would require the U.S. State Department to negotiate with Canada over delaying a decision on the waste facility until the study is completed. Rep. Dan Kildee, a Democrat from Flint Township, said he would offer the same measure in the House.

The proposal by publicly owned Ontario Power Generation for permanently storing 7.1 million cubic feet of radioactive waste "is an unnecessary threat to both the U.S. and Canada's shared water resources," Kildee said.

The legislation would invoke a 1909 treaty allowing either nation to require a review by the International Joint Commission when differences arise over their shared waterways. The treaty established the commission to provide advice on matters such as water pollution, water levels and air quality in boundary regions.

Japan restarts reactor after break due to Fukushima

By Mari Yamaguchi and Elaine Kurtenbach

TOKYO (AP) — A power plant operator in southern Japan restarted a nuclear reactor on Tuesday, the first to begin operating under new safety requirements following the Fukushima disaster.

Kyushu Electric Power Co. said Tuesday it had restarted the No. 1 reactor at its Sendai nuclear plant as planned. The restart marks Japan's return to nuclear energy four-and-half-years after the 2011 meltdowns at the Fukushima Dai-ichi nuclear power plant in northeastern Japan following an earthquake and tsunami.

The national broadcaster NHK showed plant workers in the control room as they turned the reactor back on. Tomomitsu Sakata, a spokesman for Kyushu Electric Power, said the reactor was put back online without any problems.

The Fukushima disaster displaced more than 100,000 people due to radioactive contamination and spurred a national debate over this resource-scarce country's reliance on nuclear power.

Fukushima update: Challenges remain at destroyed nuke plant

By The Associated Press

TOKYO (AP) — As Japan resumed generating nuclear power Tuesday, restarting 1 reactor in the south, the destroyed Fukushima Dai-ichi plant in the northeast remains a highly radioactive site, more than four years after an earthquake and tsunami triggered meltdowns in three of its six reactors.

A look at the status of the plant:

RADIATION LEAKS

Water is still being pumped into the reactors to prevent further meltdowns, and huge amounts of it, now radioactive, have leaked out of the damaged containment chambers and into other parts of the buildings. Some has leaked outside, so a sea wall and an underground barrier have been built to try to block the contaminated water from reaching the sea. Any leakage now appears to be minimal, but the immediate coastal waters are largely closed to commercial fishing.

Australia criticized over greenhouse-gas reduction target

By Rod McGuirk

CANBERRA, Australia (AP) — Australia has been criticized over its new greenhouse-gas reduction target which lags behind the ambitions of most wealthy countries.

Lawmakers in Prime Minister Tony Abbott's conservative government on Tuesday agreed on a target of curbing carbon gas emissions to at least 26 percent below 2005 levels by 2030. The target could go as high as 28 percent, Abbott said.

"This is fairly and squarely in the middle of comparable economies," Abbott told reporters.

The target scales back a draft proposal to reduce Australian greenhouse gas emissions by 30 percent in that period.
